

## ATTAINING EXCELLENCE

One measure of excellence is the frequency our staff members engage in scholarly activities that support the profession at large (e.g., publications, conference presentations). Although scholarly activities are varied, Melmark has identified several activities to evaluate staff participation in scholarly activities. Each of these activities are briefly described below, followed by a four-year history of staff activities in each category.

Publications – Employees are encouraged to share data and professional expertise through the publications of peer-reviewed journal articles, books, and newsletters. These publications support the development of the profession at large. Melmark supports its employees in activities that lead to publication.

Conference Presentations and Workshops – Employees attend regional, national, or international conferences and present research data or professional expertise with attendees. Most presentations are peer-reviewed by conference administrators to ensure the content is of sufficient quality to meaningfully impact attendees. Conference presentations and workshops highlight Melmark's commitment to research and clinical practice that enhances the discipline of behavior analysis.

College and University Appointments – Melmark has an interest in developing and training the next generation of service providers. Melmark employees, at times, support this goal through appointments at local and regional colleges and universities. Activities often include teaching courses and supervising clinical training for students.

Awards – Due to their outstanding professional contributions to our field, our employees are recognized for their work. Melmark takes great pride in this accomplishment and these acknowledgements are highlighted.

Editorial Service – Many publishers of magazines, journals, and books utilize some aspect of a peer-review process of material prior to publication to determine merit and impact of the material. Professionals are often asked to voluntarily serve in this peer-review capacity. Professionals supporting the peer-review process are often considered experts of the material they are asked to review. Editorial service by Melmark employees enhances clinical service by helping individuals maintain contact with research practices. It also enhances the discipline of behavior analysis through support of the peer-review process.

Professional Association Service – Professional organizations typically exist to increase the capacity of current professionals, support development of aspiring professionals, and to advocate for policies and procedures that support practice of the profession. Many associations rely upon volunteers within the profession to achieve these goals. Melmark supports employees serving in these capacities as it allows Melmark to remain current of news, trends, and activities within the profession.

Expert Speaker Series – Melmark offers workshops and seminars for parents, staff, and professionals in the communities we serve. We host speakers from the top of their fields who present on a variety of important and meaningful topics. *Please see pages 72-752 and take the opportunity to view many of these sessions [here](#).*
